International Guidance on Radiation Emergency Management

Edward Waller
Faculty of Energy Systems and Nuclear Science

Reflecting on the future
Réflexion sur l'avenir

June 5–7 2017 | Du 5 au 7 juin 2017 | Saskatoon, SK
Disclaimer

This is an academic presentation and does not necessarily reflect the view of the International Atomic Energy Agency (IAEA) or any other NGO, International agency, Government department or University. As such, the author of this presentation takes sole responsibility for both the content and interpretations presented here.
Purpose of this talk

- To provide insight into international guidance available for emergency preparedness and response to a nuclear or radiological emergency

- International Atomic Energy Agency (IAEA)

- Why me?
Limitations of International Guidance

- The only agency that MUST follow IAEA guidance is......the IAEA!

except

- If a Member State requests IAEA assistance, they must demonstrate that they follow IAEA guidance
The Big Question

Is it safe?
Remember

Everybody goes home safely at the end of their shift.

International Guidance
PHASES OF AN ACCIDENT
A nuclear or radiological emergency does not follow an ideal timeline…
**Preparedness Stage**

- Planned or Existing Exposure Situation

**Nuclear or Radiological Emergency Exposure Situation**

- Declaration of emergency class
- Precautionary and urgent protective actions
- Early protective actions
- Recovery operations to enable transitioning
- Termination of nuclear or radiological emergency

**Recovery Operations**
Early Response Phase
Transition Phase
Urgent Response Phase

Planned or Existing Exposure Situation
Preparedness Stage

Nuclear or Radiological Emergency Emergency Exposure Situation

Declaration of emergency class

Precautionary and urgent protective actions
Early protective actions
Recovery operations to enable transitioning

Hours to Days
Days to Weeks
Days to Years

Termination of nuclear or radiological emergency
Recovery operations
Early Response Phase

Preparedness Stage

Nuclear or Radiological Emergency Exposure Situation

Urgent Response Phase

Planned or Existing Exposure Situation

Emergency Exposure Situation

Declaration of emergency class

Precautionary and urgent protective actions

Hours to Days

Early Response Phase

Days to Weeks

Early protective actions

Days to Years

Transition Phase

Recovery operations to enable transitioning

Termination of nuclear or radiological emergency
Preparedness Stage

IAEA Safety Standard Series No. GSR Part 7 defines the preparedness stage as:

The stage or phase at which arrangements for an effective emergency response are established prior to a nuclear or radiological emergency.
Nuclear or Radiological Emergency
Emergency Exposure Situation

Preparedness Stage

Decloration of emergency class

Emergency Exposure Situation

Precautionary and urgent protective actions

Early protective actions

Early protective actions

Recovery operations to enable transitioning

Recovery operations

Hours to Days

Days to Weeks

Days to Years

Transition Phase

Urgent Response Phase

Early Response Phase

Planned or Existing Exposure Situation

Termination of nuclear or radiological emergency
Emergency exposure situation

IAEA Safety Standard Series No. GSR Part 3 defines the emergency exposure situation as:

A situation of exposure that arises as a result of an accident, a malicious act or other unexpected event, and requires prompt action in order to avoid or reduce adverse consequences.

Emergency exposures can be reduced only by protective actions and other response actions.
Early Response Phase

- Preparedness Stage
- Nuclear or Radiological Emergency Exposure Situation
- Planned or Existing Exposure Situation

Urgent Response Phase

- Declaration of emergency class
- Precautionary and urgent protective actions
- Early protective actions
- Recovery operations to enable transitioning
- Recovery operations

Hours to Days
- Days to Weeks
- Days to Years
Protective actions

IAEA Safety Standard Series No. GSR Part 7 defines a protective action as:

An action for the purposes of avoiding or reducing doses that might otherwise be received in an emergency exposure situation or an existing exposure situation.

- **Mitigatory action**: Immediate action by the operator or other party:
  
  - (a) To reduce the potential for conditions to develop that would result in exposure or a release of radioactive material requiring emergency response actions on the site or off the site; or
  
  - (b) To mitigate source conditions that may result in exposure or a release of radioactive material requiring emergency response actions on the site or off the site.
Protective actions

- **Urgent protective action**: A protective action in the event of a nuclear or radiological emergency which must be taken promptly (usually within hours to a day) in order to be effective, and the effectiveness of which will be markedly reduced if it is delayed.

  - Urgent protective actions include **iodine thyroid blocking**, evacuation, short term sheltering, actions to reduce inadvertent ingestion, decontamination of individuals and prevention of ingestion of food, milk or drinking water possibly with contamination.

  - A precautionary urgent protective action is an urgent protective action taken before or shortly after a release of radioactive material, or an exposure, on the basis of the prevailing conditions to avoid or to minimize severe deterministic effects.
Protective actions

- **Early protective action**: A protective action in the event of a nuclear or radiological emergency that can be implemented within days to weeks and still be effective. The most common early protective actions are relocation and longer term restriction of the consumption of food potentially affected by contamination.
Termination of the emergency

The termination of the emergency is defined in the IAEA Safety Standard Series No. GSR Part 3 and GSR Part 7 and in the draft Safety Guide DS474 as:

- **The transition from an emergency exposure situation to an existing or planned exposure situation:**
Early Response Phase
Transition Phase
Urgent Response Phase

Planned or Existing Exposure Situation

Preparedness Stage

Nuclear or Radiological Emergency
Emergency Exposure Situation

Declaration of emergency class

Hours to Days
Days to Weeks
Days to Years

Early protective actions
Recovery operations to enable transitioning

Precautionary and urgent protective actions
Early protective actions
Recovery operations
IAEA Safety Standard Series No. GSR Part 3 defines the existing and planned exposure situations as:

- **Existing exposure situation:** A situation of exposure that already exists when a decision on the need for control needs to be taken. Existing exposure situations include
  - exposure to natural background radiation that is amenable to control
  - exposure due to residual radioactive material that derives from past practices that were never subject to regulatory control, or
  - exposure due to residual radioactive material deriving from a nuclear or radiological emergency after an emergency has been declared to be ended

- **Planned exposure situations:** The situation of exposure that arises from the planned operation of a source or from a planned activity that results in an exposure due to a source.
INTERNATIONAL GUIDANCE
Four Categories:

1. Safety standards
2. EPR series
3. Training materials
4. Accident reports
Available IAEA Guidance

1. Safety standards
2. EPR series
3. Training materials
4. Accident reports
Introduction

- IAEA Statute authorizes the Secretariat to establish or adopt, ... **standards** of safety for protection of health and minimization of danger to life and property
- IAEA is also authorized to provide for **application** of these standards
IAEA Safety Standards
An international consensus on what constitutes a high level of safety for protecting people and the environment from harmful effects of ionizing radiation...
Safety Standards Categories

**Safety Fundamentals:**
Fundamental safety objective and principles for protecting people and environment

**Safety Requirements:**
Requirements that must be met to ensure protection of people and environment

**Safety Guides:**
Recommended ways of meeting the requirements

Safety Standards

What is not a Safety Standard

- Agency publications other than Safety Fundamentals, Safety Requirements and Safety Guides, for example:
Safety Standards
Overall Structure

Safety Fundamentals
Fundamental Safety Principles

General Safety Requirements
- Part 2. Leadership and Management for Safety
- Part 3. Radiation Protection and the Safety of Radiation Sources
- Part 4. Safety Assessment for Facilities and Activities
- Part 5. Predisposal Management of Radioactive Waste
- Part 6. Decommissioning and Termination of Activities
- Part 7. Emergency Preparedness and Response

Specific Safety Requirements
- 1. Site Evaluation for Nuclear Installations
- 2. Safety of Nuclear Power Plants
  - 2.1. Design and Construction
  - 2.2. Commissioning and Operation
- 3. Safety of Research Reactors
- 4. Safety of Nuclear Fuel Cycle Facilities
- 5. Safety of Radioactive Waste Disposal Facilities
- 6. Safe Transport of Radioactive Material

Collection of Safety Guides
Safety Standards Status

Safety Standards are:

- Non binding on Member States but may be adopted by them
- Binding for IAEA’s own activities
- Binding on States in relation to operations assisted by the IAEA or States wishing to enter into project agreements with IAEA
Safety Standards in EPR Overview

- Fundamentals
- Requirements
- Recommendations

SF-1

GSR Part 7

GS-G-2.1
GSG-2
Safety Requirements in EPR
General Requirements

- To be fulfilled before any emergency planning can start
  - Emergency management system
  - Roles and responsibilities
  - Assessment of hazards
  - Protection strategy
Safety Requirements in EPR

Functional Requirements

- Functions to be performed for response to be effective and goals of emergency response to be met
  - Managing emergency response operations
  - Identifying, notifying and activating
  - Taking mitigatory actions
  - Taking urgent protective and other response actions
  - Providing instructions, warning and relevant information to the public
  - Protecting emergency workers and helpers
  - Managing the medical response
Safety Requirements in EPR Functional Requirements (cont)

- **Communicating** with the public
- Taking early **protective** and other actions
- Managing radioactive **waste**
- **Mitigating** the non-radiological consequences
- Requesting, providing and receiving international **assistance**
- **Terminating** an emergency
- **Analysis** of emergency and the response
Safety Requirements in EPR Graded Approach

- EPR to be commensurate with hazards and potential consequences of an emergency associated with facility, activity or source
  - Concept of hazard assessment
    - Emergency preparedness categories I - V
- Safety requirements apply this graded approach and they are addressed for facilities, activities and sources in specific category(ies)
  - If applicable for all categories, no category is specified in requirements
Safety Requirements in EPR
Guidance Values for Emergency Workers

- Appendix I of GSR Part 7
- Guidance values for $H_{P}(10)$, E and $AD_T$ for restricting further exposure of emergency workers in response to a nuclear or radiological emergency

Images courtesy IAEA
Safety Requirements in EPR
Generic Criteria

- Appendix II of GSR Part 7
- Comprehensive set of generic criteria at which emergency response actions need to be taken:
  - To avoid or minimize severe deterministic effects
  - To reduce the risk of stochastic effects
  - To mitigate non-radiological consequences in relation to international trade
  - To transit to existing exposure situation
**Generic Criteria**

- **Concern**
  - Severe deterministic effects
  - Possible increase in stochastic effects

- **Generic Criteria**
  - Dose in hours
  - Dose in days
  - Dose in year

- **Actions**
  - Precautionary undelayable actions
  - Urgent protective actions
  - Early protective actions
Operational Criteria

- GC cannot be used directly in the response
  - They are based on projected or received dose...
  - …which needs to be calculated
  - Taking into account a large number of considerations and uncertainties.

- Hence the need to develop criteria that can be used directly in the response (i.e. **operational criteria**) during the **preparedness** phase based on the GC
Generic Criteria form the basis for Operational Criteria

- Observables/Indicators
- Abnormal facility conditions
- Field and laboratory measurements

- Conditions on-scene
- Emergency Action Levels (EAL)
- Operational Intervention Levels (OIL)

- ACTIONS
Observables / Indicators

- e.g. fire, earthquake, loss of control, unshielded source, RTG, RDD

Images courtesy IAEA
Emergency Action Levels

- EALs are specific, predetermined and observable criteria to detect, recognize and determine the emergency class.

EAL exceeded

Off-site decision maker implements predetermined protective actions

Pressure above xx Bar
Failure to SCRAM
Temperature above xx K
Dose rate above xx µSv/h
Loss of power for xx min

Declaration of General Emergency

Cannot protect core!

Example for a general emergency at an NPP

Initiate pre-planned response
Operational Interventional Levels (OILs)

Predetermined level of a measurable quantity to trigger response actions (based on GC) on the basis of monitoring and sampling:

Default OIL value exceeded

Immediate action

e.g. Evacuate (establish cordon) if either of the following is exceeded:

- $\gamma \rightarrow 100 \, \mu\text{Sv/h at } 1 \, \text{m}$
- $\alpha \rightarrow 10 \, \text{cps at } 1 \, \text{cm}$
- $\beta \rightarrow 200 \, \text{cps at } 2 \, \text{cm}$
Establishes the fundamental safety objective, safety principles and concepts that provide the bases for the IAEA’s safety standards and its safety related programme

Principle 9:
- Emergency preparedness and response
- “Arrangements must be made for emergency preparedness and response for nuclear or radiation incidents.”
Safety Requirements No. GSR Part 7 (2015)

- Establishes requirements for an **adequate level of preparedness and response** for a nuclear or radiological emergency, irrespective of its cause
- Requirements level: ‘Shall’ or ‘What’ to be done
Safety Requirements No. GSR Part 3 (2014)

- Relevant requirements in Section 4 on Emergency Exposure Situations
  - Requirements level: ‘Shall’ or ‘What’ to be done

- GS-G-2.1 provides recommendations on implementation of specific safety requirements established in GS-R-2 (now GSR Part 7)
  - Recommendations level: ‘Should’ or ‘How’ to be done
GSG-2 provides guidance on criteria for taking protective actions and other response actions in a nuclear or radiological emergency.

- Recommendations level: ‘Should’ or ‘How’ to be done.
Available IAEA Guidance

1. Safety standards
2. EPR series
3. Training materials
4. Accident reports
Support for the Standards

- Safety Standards in EPR (GSR Part 7, GS-G-2.1 and GSG-2) describe “what” an adequate level of emergency preparedness and response is and provide guidance “how” that can be achieved.

- EPR Series support the application of the IAEA Safety Standards:
  - EPR Series give further technical guidance and tools to support the establishment of effective and efficient EPR system by Member States.
EPR Series - General

- Method for Developing Arrangements for Response to a Nuclear or Radiological Emergency
  - Provides guidance for meeting the requirements (GS-R-2; superseded by GSR Part 7)
  - Incorporates the lessons learned from use of IAEA-TECDOC-953
EPR-Exercise (2005)

- Preparation, conduct and evaluation of exercises to test preparedness for a nuclear or radiological emergency
  - Provides practical guidance for planners to efficiently and effectively prepare, conduct and evaluate emergency response exercises
The objectives of this publication are

- To describe, in detail, the basis for the D-values
- To provide an expanded set of D-values that includes other radionuclides that may be important in the event of a nuclear or radiological emergency
The objectives of this publication are

- To provide a review of the lessons from the response to a number of radiation emergencies with the purpose of consolidate them.
- To demonstrate the necessity of establishing arrangements for EPR
The objectives of this publication are
- To assist States that are considering embarking on a nuclear power programme to develop an adequate level of EPR prior to commissioning their first NPP and ensure the maintenance of the EPR programme throughout the lifetime of the facility.
EPR Series - Medical

Images courtesy IAEA
EPR-Medical (2005)

- Generic procedures for medical response during a nuclear or radiological emergency
  - Provides generic response procedures for medical personnel responding to different types of radiation emergencies
The primary objective of this publication is

- To provide technical information for selecting and implementing, in a standardized manner, the appropriate cytogenetic technique to ensure comparable dose assessment following accidental exposure to ionizing radiation.
EPR-First Responders (2006)

- Guidance for first responders and for national officials who would support this early response
  - Action guides, instructions, data
Objectives of this publication are
- To describe appropriate responses to a range of emergencies at Hazard Category II and III research reactor sites
- To describe the on-site organization needed to respond to these emergencies
- To provide tools to organize the emergency response actions at these reactor sites
The objectives of this publication are

- To provide practical guidance to those responsible for keeping the public and media informed and coordinating all sources of official information to ensure a consistent message is being provided to the public.
The objective of this publication is
- To provide an understanding of the actions necessary to protect the public for those responsible for making and for acting on decisions in the event of an emergency (LWR or spent fuel pool)
Available IAEA Guidance

1. Safety standards
2. EPR series
3. Training materials
4. Accident reports
EPR Training Material

- Standard material based on EPR-series or standards.
- Available on-line as Powerpoint presentations
- Options to use it during training events:
  - In projects
  - Supporting specific national needs (when feasible)
  - As part of national on-going activities
EPR Training Material

Putting it all together with training
Spotlight on the IAEA School of Radiation Emergency Management: Training on Nuclear or Radiological Emergency Preparedness and Response

TRAINING (SREM)
School of Radiation Emergency Management

- **Purpose:** To provide participants with an understanding of the international principles, requirements and guidelines on EPR, based mainly on IAEA’s safety standards on EPR and technical tools
- **Duration:** Three weeks
- **What:** To ensure that an adequate capability is in place within the operating organization and at local, regional and national levels and, where appropriate, at the international level, for an effective response
  - To **regain control** of the situation and to mitigate consequences
  - To **save lives**
  - To avoid or to minimize severe **deterministic effects**
  - To render first aid, to provide **critical medical treatment** and to manage the treatment of radiation injuries
  - To reduce the risk of **stochastic effects**
  - To keep the **public informed** and to maintain public trust
  - To mitigate, to the extent practicable, **non-radiological consequences**
  - To protect, to the extent practicable, **property and the environment**
  - To prepare, to the extent practicable, for the **resumption of normal social and economic activity**
The School of Radiation Emergency Management has adopted a modular approach to training, which allows us to adapt training to fit specific needs and goals.
Thank You
